Every card reaches the board over a **PCIe Gen1 ×1 riser** (~250 MB/s). The MoE model runs ~27.7 tok/s, 2 slots of 262k context.

No NVLink

Platform

BOARD	**ASUS B250 Mining Expert** · BIOS 1001 (reflashed)
CPU	**Intel Celeron G3930** · 2 cores · 2.9 GHz
MEMORY	**8 GB DDR4** · 1 × 8 GB Corsair Vengeance LPX · 2133 MT/s. With 2 sticks the board won't POST
STORAGE	**Samsung 860 EVO 250 GB** (M.2 SATA) Boot + model. A second 256 GB SSD is installed but not detected by the OS.
NETWORK	**Wired Ethernet** · onboard Intel I219-V · NetBird overlay
OS	**Ubuntu 24.04.3 LTS** · kernel 7.0.0-38
GPU STACK	**NVIDIA 580.178.04** (DKMS) · CUDA 12.6 · Pascal sm_61
INFERENCE	**llama.cpp** llama-server · layer split across cards

Power

1800 W brand unknown	board + CPU · ▯▯▯▯▯	5 GPUs
850 W EVGA	▯▯	2 GPUs
1300 W Antec	▯▯	2 GPUs

Team-reported. The 9th card is believed to be on the Antec. Which card is on which supply isn't recorded.

Services

:9000	**Orchestrator** one model, reached from Open WebUI over NetBird	●
:8081	**Worker** llama-server, localhost only	●
–	**Ollama** disabled (was only used to pull models)	○

Verified over NetBird SSH 2026-10-20 (`nvidia-smi`, `dmidecode`, `lsblk`). Power supplies are team-reported. Source of truth: **docs/architecture/hardware.md**
